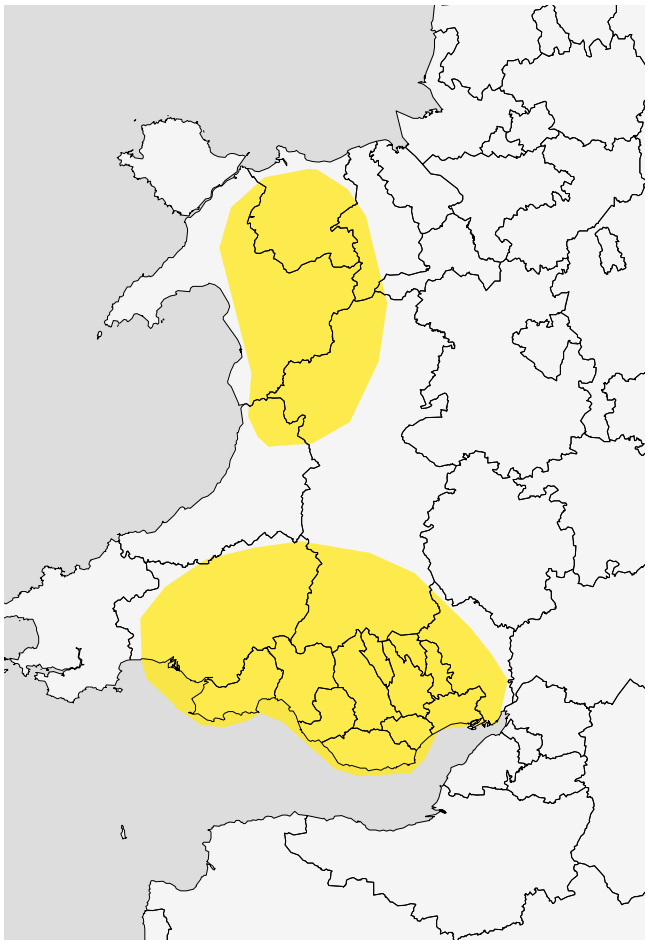
Yellow warning
**Rain**

Between
**18:00 Wed 19 Feb 2020** and
**15:00 Thu 20 Feb 2020**



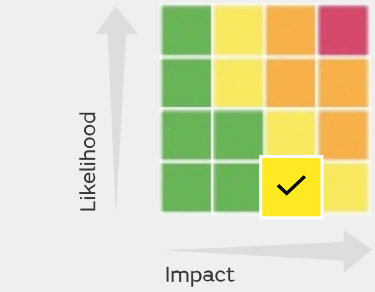
## Rain arriving Wednesday morning may become persistent, and possibly heavy, over areas of high ground in Wales, before clearing Thursday.

### What to expect

- There is a small chance that homes and businesses could be flooded, causing damage to some buildings
- Should flooding occur, there is a chance of delays or cancellations to train and bus services
- Spray and flooding could lead to difficult driving conditions and some road closures

### Further details

An Atlantic weather system arriving on Wednesday is expected to bring a further spell of rainfall which is likely to become particularly prolonged over areas of high ground. Whilst there is more uncertainty over the rainfall totals for south Wales, there is a small chance that 50-60 mm could fall here in 24 hours. There is higher confidence in the rainfall for north-west Wales, with between 70 and 100 mm of rain most likely. Given already saturated ground, in south Wales in particular, there is a small chance of further flooding during this event.



✓ Very low likelihood of medium impacts
